## Use of Self-Adhering Mod Bit membranes and cold temperatures

The minimum application temperature for Mule-Hide SAMB materials is 40°F and rising.

In order to perform properly, Mule-Hide SAMB materials require a minimum application temperature of 40°F and rising. This applies to the roofing materials and approved substrate. During installation, the membrane must be promptly rolled with an minimum 75# roller. Failure to abide by these requirements may result in poor adhesion or cracking issues.

During periods of colder weather, the Mule-Hide SAMB materials should always be stored at room temperature (60° to 80° F) until just prior to use. Materials that are not stored at room temperature (or not used within 4 hours) should be restored to room temperature prior to use.

The information given on this Technical Bulletin is subject to change without notice. Always check the Mule-Hide website at [www.mulehide.com](http://www.mulehide.com) for the latest information, changes and updates or contact Mule-Hide Products Company at 800-786-1492.
